RAINBOWS!

It is important to teach all kids about colors, even if they have a visual impairment and might not be able to see them. If they start learning about colors-- and that objects are different colors-- from when they are young, it will help them with concept development!

Here is a simple and fun Paper Plate Rainbow from A Night Owl Blog.

What You'll Need:

- Scissors
- Paper plate cut in half
- Cotton Balls
- Glue
- Scissors
- Staplers
- Various colors of card stock or construction paper
(or color white paper with markers/crayons)

Here is a link to one of my favorite songs about the colors of a rainbow:
